

TOP 2012

Winchester, UK

September 16th-21st 2012

Organized by:

Veronique Boisvert (Royal Holloway, University of London)

Lucio Cerrito (Queen Mary, University of London)

Stefano Moretti (University of Southampton)

Giuseppe Salamanna (Queen Mary, University of London)

Christian Schwanenberger (University of Manchester)

5th International Workshop on Top quark Physics

The workshop will bring together about 150 experimentalists and theorists, to review the status and future prospects of top quark physics. The programme will include the latest results from the LHC experiments and from the Tevatron, presentations of theoretical developments and a Poster session to encourage participation from young researchers.

The goal of the workshop is to provide a comprehensive picture of top physics and a forum where experimentalists and theorists can discuss the interpretation of top quark results and future measurements.
