Meetings at CERN

DIG Meeting

- Level 2 studying the optimal organisation of FEs into RODs (SCT, Pixels, LAr)
- Detector requirements document is out of date. Subdetectors should look at it and send updates.
- DAQ group (Dave Francis) looking for input/encouragement for extending DAQ-1 functionality into the ROD crate.

ROD Meeting

- Proposal to use BCRESET to reset errors (every few seconds? minutes?)
- ROD crate standard: VME 64ext. Proposal for a bulk order of 9U crates if we can acheive as much commonality as possible, eg power supply, backplanes, minimal monitoring/controls (use DCS).
