

# Online Software

- Only minor changes (as usual) for present system
- Started adding more support for Run 3 modules
  - Empty/trivial simulation packages for FTM, gFEX, eFEX
  - Empty(ish) hardware control packages now for all modules
  - Simple TDAQ OKS databases for RAL, Birmingham, Cambridge and (dummy hardware) setup for gFEX development
- Some "to do list" items
  - IPbus address and programming models for all modules
    - Agree syntax for gFEX to produce an IPbus address map...
    - What is the status of the intended common part of IPbus map
  - Understand TDAQ/Menu/Calibration database needs
  - Consistent playback behaviour across FEXes
    - Synchronised by TTC orbit (BCR) signal? Number of BCs?
    - Also still need to discuss with LAr
